Simple Function, Advanced Design

GutterFilter completely fills the gutter at the top, sealing out ALL types of debris. Water pours through it like a sieve, while leaves and seeds flow over the top... or just dry up and blow away.

Made from exterior-grade urethane, GutterFilter is precisely cut to fit into “K” and half-round style gutters. While very porous and pliable, it is also highly resistant to physical stress and deterioration. It was formulated to withstand the harshest weather conditions

How Does it Work

When GutterFilter completely fills and seals the top of your gutter system, there’s no room left for leaves, seedpods or maple tree “helicopters”. Birds and wasps can’t nest and mosquitoes can’t breed.

No more clogged gutters and, best of all, no more cleanings! While water pours through the torrents, debris is either pushed off, or eventually dries up and blows away – it’s just that simple.

Proven Performance

This product has been used in thousands of home and commercial environments, many of them subjecting it to unbelievably heavy debris. Before you use another product (and risk an expensive disappointment), try the gutter protection product with the strongest guarantee in the business.

No More Gutter Worries

- Since GutterFilter fits snugly inside gutters, it will not collapse or become dislodged like plastic gutter guards or screens.
- It fits under your gutter’s hanging brackets to form an impenetrable seal for your gutter system.
- GutterFilter can’t be damaged by falling debris, like those expensive and unsightly aluminum and plastic gutter caps.
- GutterFilter installs so neatly into gutters, it’s invisible from the ground level. But you’ll know it’s there, protecting your gutters and your home, year after year.
- Birds and mice will not be trapped.

GutterFilter is Simply the Best

- Can’t bend, dent or crack like aluminum, or be damaged by ice and snow, falling tree limbs, or high winds.
- Preferred by Roofing Contractors: No damaging nails or screws; won’t void roof warranty; Allows homeowner to re-shingle without destroying their gutter protection.

Protect Your Home and Stop Cleaning Your Gutters!
