

Rain Barrel Kits from THE RAIN WELL

For all of the do-it-yourselfers, good news! The Rain Well now has rain barrel kits available online! If you have your own drum or barrel, you can use these kits to convert them to rain barrels and start collecting wonderful and ever-precious

rainwater.

Available are poly bulkhead fittings, rubber grommets, garden drain valves, mating kits and spigots.

The fittings and grommets are ideal for curved surfaces such as 55 gallon drums. They can be used on metal, plastic, fiberglass, tubs, stock tanks, and recycled drums.

The 3/4" poly bulkhead fitting is ideal for 3/4" drain valves and 3/4" bucket high spigots. The 1-1/2" poly bulkhead fittings and rubber grommets are ideal for overflows and rain barrel mating.

The 3/4" poly bulkhead fitting can be used to replace a worn out makeshift fitting that is just a hole in the side of the barrel that was tapped with the spigot. A 3/4" overflow

can be replaced with a higher capacity 1-1/2" or 2" bulkhead fitting for the occasional downpour so that the rain water does not overflow from the top of the rain barrel.

A 1-1/2" link kit can be used to connect a rain barrel to a series of companion tanks for extra rain barrel capacity. A variety of garden drain valves is also available from a simple garden valve, to a freeze resistant butterfly drain valve in a ball valve housing.

Rain barrel rainwater storage usages include **rainwater harvesting, fire suppression, water conservation, irrigation, livestock water, excess swamp cooler water, and river water storage.**

Available Materials

3/4" Poly Bulkhead Fitting
1-1/2" Poly Bulkhead Fitting
2" Poly Bulkhead Fitting
1-1/2" Rubber Grommet Fitting
2" Rubber Grommet Fitting
3" Rubber Grommet Fitting
4" Rubber Grommet Fitting
3/4" Garden Drain Valve – Poly Housing
3/4" Garden Drain Valve – Zinc Housing
3/4" Garden Drain Valve – Brass Housing
3/4" Garden Drain Ball Valve
3/4" Garden Drain Butterfly Valve
1-1/2" Link Kit to Companion Tank
3/4" Acetyl Garden Spigot
